

## Total Purity Solutions

# SOCOT - by Ocean Team

## Safe Oil Conversion for Offshore Turbines

**Oil conversion in a safe way for offshore work at heights is what SOCOT is all about!**

**Oil conversion on offshore wind turbines is taken to a new level by Ocean Team's SOCOT concept being safe, efficient, cost-effective, and environmental friendly focusing on quality.**

The double hose reel is hydraulic wave compensated by automatic tensioning including two patented umbilical brake-away rescue and safety device systems.

By integrated filters and heaters, purity and viscosity can be ensured meaning the wind turbine manufacturers demand on purity will be fulfilled. - And pre-heated oil means the right working temperature will be reached shortly after the turbine starts up.

### Designed to Offshore Norms

Ocean Teams SOCOT-unit for total purity oil conversion is designed for heavy offshore lifting, including e.g. complete oil spill safety kit. The Ocean Team SOCOT-unit completes DNV 2.7-1, ISO 1496, EN 12079 and the IMDG (International Maritime Dangerous Goods) code for lifting and offshore safety.

### One-Stop-Shop Service Concept

Ocean Team offers a unique oil conversion package:

- Supply of new oil - competitive prices and terms
- Replacing and decommissioning old oil
- Rinsing or flushing the gear or fluid system (optional)
- Filtering and refilling new gear and/or hydraulic oil
- Analysing new and old oil (optional) at own laboratory according to NAS and/or ISO-standards.

### Extended Life Time for Wind Turbines

Ocean Team Group of companies offer flexible project models for competitive pricing: Turn Key, Joined Solution or a rental agreement.
