

## Technical datasheet

### Water Analysis Package

#### Introduction

The standard laboratory analysis measures the following:

- pH-values and conductivity at 25 degrees Celsius
- Total suspended matter
- Total hardness and calcium hardness
- Chloride
- Sulfate
- Phosphate
- Silicate
- Iron
- Copper
- Zink
- Molybdenum
- Ethylen
- Glycol

The analysis is obtainable with a report or without a standard lab conclusion.

Written evaluation of analysis results by experienced water treatment specialist is obtainable.

OTS item number.:

#### Features

- Can be delivered with or without conclusion

#### Safety features

#### Capacity & performance

|               |               |
|---------------|---------------|
| Type of fluid | Cooling Water |
|               |               |
|               |               |
|               |               |
