

Total Purity Solutions

In-depth Oil Conditioning

- Prevent Varnish Formation and Avoid Production Loss

Eliminate and prevent varnish formation without any system shutdown with Ocean Teams newly developed and patented method

Once varnish deposits generate in your system, it can be very difficult to eliminate. We therefore focus on eliminating the catalysts to varnish in order to prevent the formation process from starting.

Remove All Catalysts in ONE Step

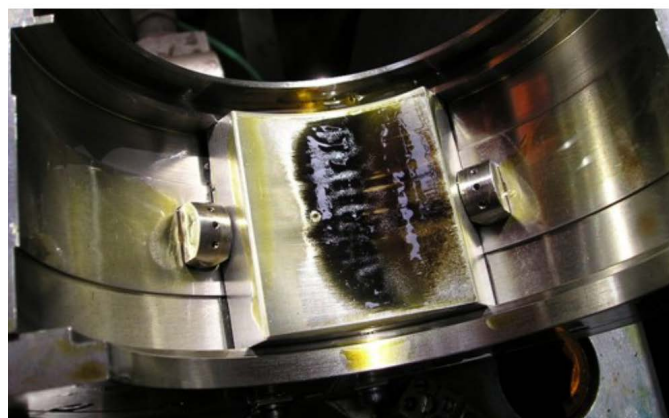

In only ONE single step, our unit is able to remove all known catalysts to varnish including:

- Foreign substances - internal and external particles in the oil
- Moisture - water mixed in the oil
- Gases and air bubbles
- Possible varnish formation

Remarkable Benefits

Ocean Teams "In-depth Oil Conditioner" represents a new way of thinking degassing and dehydration of oil giving some remarkable benefits:

- **Online cleaning = No production loss** - no shutdown of the infected system during cleaning, saves expensive production loss.
- **ATEX approved system** - the method is approved for operation in potentially explosive atmospheres.
- **High flow capacity** - a capacity of more than 150 litres/minute ensures a fast cleaning of medium and large-sized oil systems.
- **Longer lifetime of the oil** - cleaning the oil rather than changing it, saves cost and is positive for the environment.

"Varnish is Your System's Toughest Enemy"

Eliminate and prevent varnish formation. It can 'be difficult, yet in order to prevent varnish eliminate the catalysts
