

Total Purity Solutions

Chemical Cleaning - Generator Coolers

- removal of organic & inorganic contaminations

Ocean Team has developed equipment, methods and technologies that efficiently purifies a wide variety of systems including coolers for generators and converters in modern wind turbines.

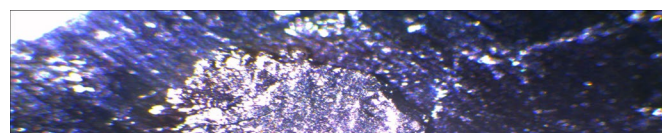

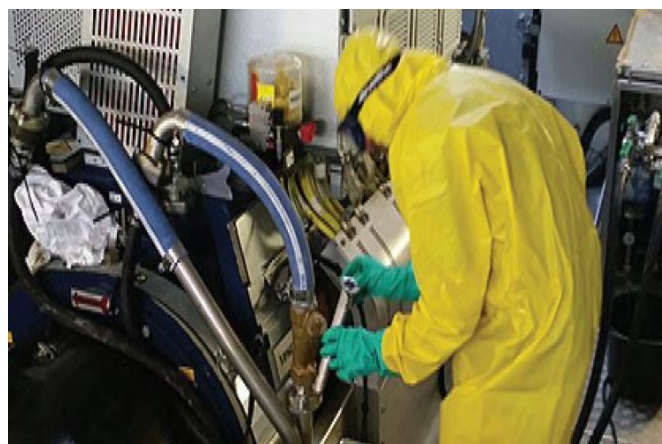

Life extension of wind turbines to benefit for the wind farm owners is a core business for Ocean Team Windcare. Purifying and conservation of generator coolers is included. Keeping the recommended temperature in generators and converters is significant for the power output and avoiding need for non-scheduled service in the wind season.

Benefits of proper temperature in your generator

- Securing maximum production in the wind season
- Extended lifetime for the cooling liquids inhibitors
- Avoiding non-scheduled service and break down
- Reduced risks for fire by overheating
- Services can be scheduled out of the wind season

Related Services

Analysis of inhibitors and additives in cooling liquids, mechanical services for retrofit, and upgrades for improved performance are also a part of the service package provided by Ocean Team Windcares specialists.

“What kind of fouling deposits are causing trouble in your oil lubrication system?”

Ocean Team provides the answer along with a solution on how to remove problems inside your system and avoid them in the future.
