## Trend Health Check & Monitoring Program

- In-depth Fluid Condition Analysis at Laboratory

**A thorough monitoring program is essential for an efficient preventive maintenance of your system.**

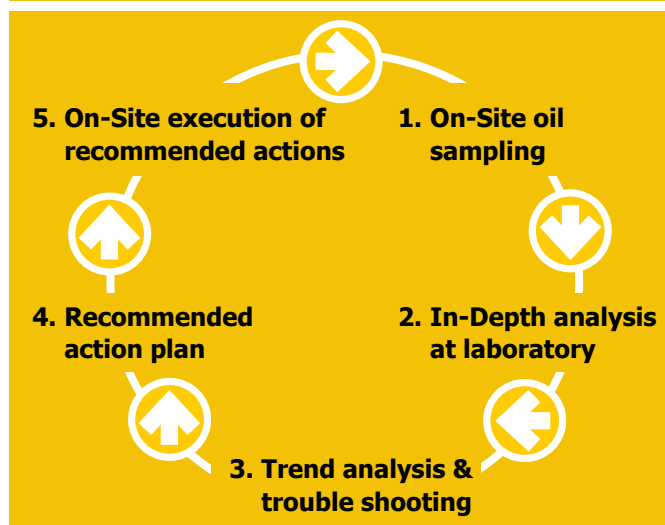

Our program detects even the smallest changes in the health of your system at a very early stage, which will enable you to take action before the changes causes interruptions within the production.

### "We Complete the Circle"

- 1. On-site Oil Sampling:** Assistance with representative oil sampling in accordance to standards: ISO 4021, ISO 4407, ISO 3722, NAS 1638 and AS 4059.
- 2. In-depth Analysis at Laboratory:** Execution of a wide range of both routine and special analysis tests. Read more about the content of different analysis packages on the following pages.
- 3. Trend Analysis & Trouble Shooting:** Test results are saved in a database enabling us to perform trend-analyses for each unique system. Any deviations from the normal trend curve will immediately be identified and followed up by a trouble shooting process in order to identify, what is causing these divergent test results.
- 4. Recommended Action Plan:** Consultation of recommended further actions, which will spare you for unnecessary shutdowns and production loss.
- 5. On-site Execution of Recommended Actions:** Not only do we recommend a problem solving action plan and use differentiating technologies. We also offer to complete the circle by executing the agreed actions and hereby eliminate those trouble making factors in your system.
