

Event - Reduce Outages, Eliminate Lube-Related Shutdowns

We are delighted to announce the detail and joining instructions for **Fluitec's Lubrication Academy 1-Day event to be held at the iconic Sheraton Grand Doha Resort in Doha Qatar 25 April 2017**. This event is co-sponsored by Ocean Team Qatar.

How to reduce your outage by days and eliminate lube-related shutdowns, trips and fail-to-starts. Our Lubrication Academy provides the most advanced and up-to-date knowledge available to assist plant maintenance and mechanical engineering professionals to manage their lubricating assets, minimise costs and deliver lubricant fill-for-life solutions to their business.

Today's rotating equipment can be a technically challenging environment for modern lubricants. Formulations are evolving. Equipment duty cycles are changing. Fluitec's Lubrication Academy provides the latest technical information to help navigate through these changes.

Leading operations view their lubricants as an asset rather than a consumable. This change in mindset results in longer-lasting, higher-performing lubes translating to increased reliability and lower O&M costs. This course could prove to be the catalyst to change how your company views your lubricants.

What You'll Learn:

- How to select the best oil for your application using performance data.
- Why oils fail, how you can detect this failure mode and what you can do to minimize lubricant-related failures and downtime.
- How varnish forms and what can be done to eliminate varnish concerns permanently .
- What are the most accurate and best value oil analysis tests and how you can optimise your Condition Monitoring program.
- How to determine the end of your oil's useful life.
- How you can double or triple the life of your oils.
- When to consider flushing and best practices for oil changes.
- How proper lubricant management can increase your bottom line.
